15th July 2010

Dear Ms Cawthorne,

CO4 and Coastline Management Plan

Following recent exhibitions of the Coastline Management Plan it has been noted that this will have a dramatic effect in the area close to CO4.

Enclosed is a copy of the predicted erosion for various periods up to 2105. It can be seen that the cliffline could well be no more than 65 metres from CO4 on the east side. This would bring into serious question the sustainability of this site.

Furthermore the erosion would greatly reduce the land which is presently used for recreational purposes including Warren Woods, the Playing field to the east of Warren Woods, Happy Valley and large parts of the Golf Course.

We apologise for bringing this to your notice at this late stage, but we had not seen it until a few days ago and felt that it should be brought to the attention of the Inspector.

Yours Sincerely

John and Ann Graveling
